

# **Global Protect**

# **Connection Guide**

1- Open the Global Protect VPN program installed on your computer. In the **Portal** field, enter *vpn.cbar.az* and click **Connect**.

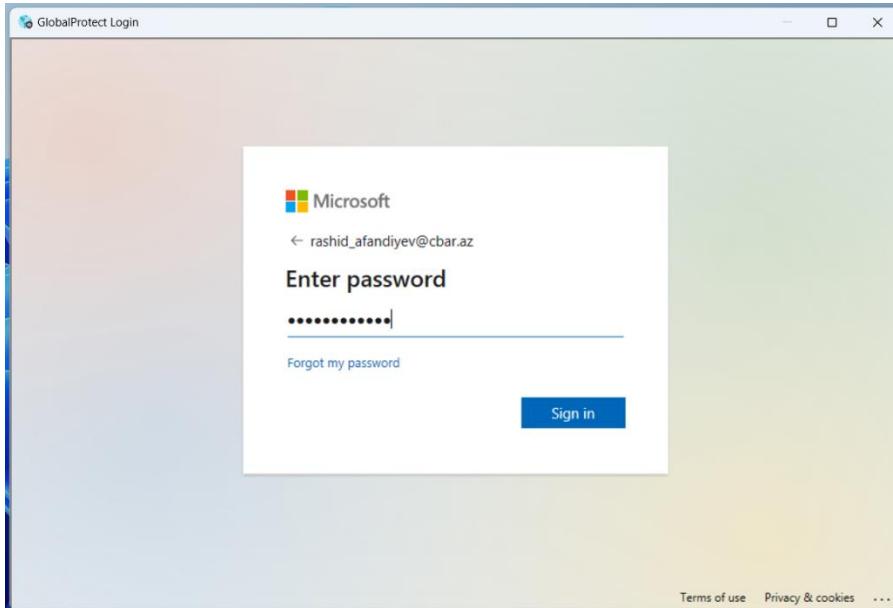

2- In the window that opens, enter your email address and click **Next**.

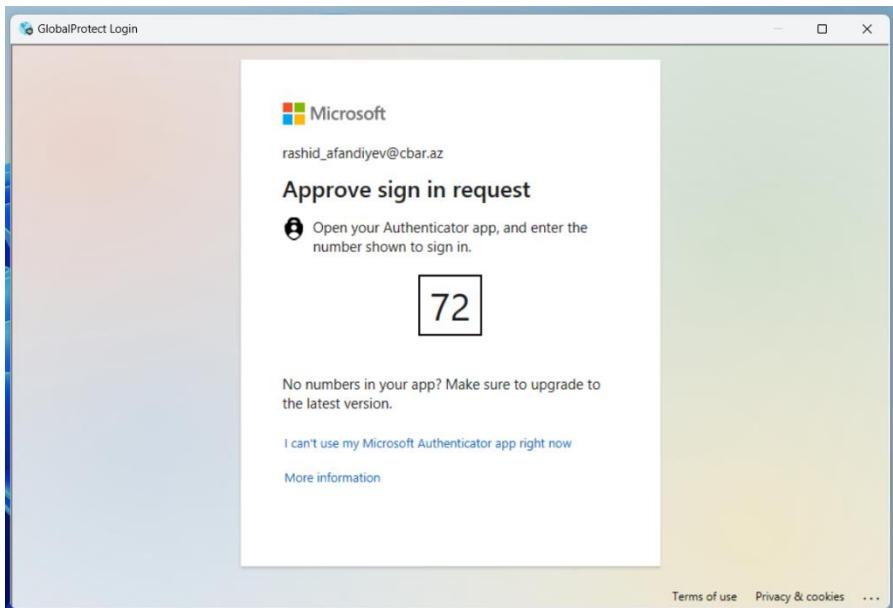

### 3- Next, enter your Domain password and click Sign in.

*Note: Your domain password is the password you use to log in to your work computer.*

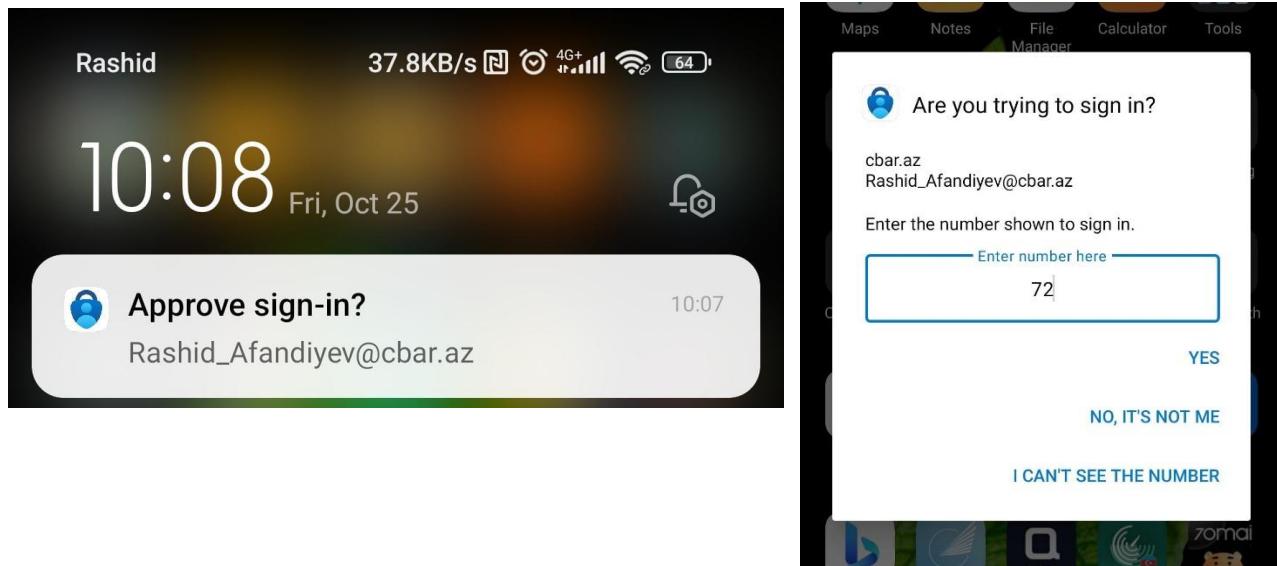

- 4- The following page will appear, showing a verification code. At the same time, you will receive a notification from the Microsoft Authenticator app on your phone. (If a different page appears, continue from the "**Microsoft Authentication**" instructions)

## 5- Open the notification, enter the displayed code, and click **Yes**.

*Note: If the notification does not appear, open the Authenticator app and verify from there.*

## 6- On this page, click **No**. The connection process will be completed, and a **Connected** message will appear.
